### Cybercrime tactics and techniques

The coronavirus pandemic has left the world looking very different at the end of the quarter than it did at the beginning. For starters, millions of workers are out of the office and working from their homes. This change in scenery, combined with safe social distancing efforts that help prevent the spread of COVID-19, has created a crisis for many, but an opportunity for some.

### Seven DevOps tips for faster app development

DevOps is about speed: faster application development, faster updates and continuous development, and faster shipments, all of which lead to shortened systems development lifecycles. Recent research shows that high-performing DevOps teams recover from downtime 96 times faster, have a five times lower change failure rate, and deploy code 46 times more frequently.

### Flexible for the future

IT decision makers are tackling a major challenge: how can we architect our IT in a way to maximise access to the range and depth of choice the cloud offers, while also having the flexibility to adapt to changing dem multi-layered that few have comprehensively addressed. To better understand the state of play in business multicloud – that being use of multiple deployment environments and a mix of on-premises, private cloud and public cloud
